Welcome to our Annual SITZ Angus Spring Bull Sale

On behalf of the SITZ Family, we would like to sincerely welcome you to the 23rd Annual SITZ Angus Spring Bull Sale. We realize how truly blessed we are with the opportunity to do what we love and to do it with wonderful customers and friends, like you. We have reflected on and celebrated our 100-year history in the registered Angus business, and we are looking forward to raising quality cattle to serve our customers for another 100 more. We cherish your support and continued commitment to the SITZ prefix and our family.

Our goal is the same now, as it was back then—to provide you, our customer, with genetics that will not only keep you profitable today but create lasting impact and profitability for your cow herd into the days of tomorrow. We do this by using all the tools available to us, both phenotypic and genomic. We have been performance testing since the start of performance testing by taking birth, weaning, yearling, and mature cow weights. We also have utilized ultrasounding, carcass testing, foot and leg evaluations, and PAP testing throughout the years. We send in DNA on each animal for genomic testing to provide you, our customers, with the most complete and accurate EPD profiles. As the old adage goes, knowledge is power, and here at SITZ Angus, we strive to give you, our customer, the power of data-driven decisions when choosing your next herd sire.

2025 is proving to be an awesome time to be in the cattle business. The industry is seeing historical highs in all classes of cattle, and it appears that this excitement surrounding the industry is here to linger for a while. This is the time to invest in the future of your cow herd.

We are very proud of this offering of bulls as we believe it to be our strongest to date. With sons of SITZ Dignity 599J, Poss Relevance, and SITZ Incentive 704H, as well as several other notable herd sires. We are offering proven and fresh genetics, all with the SITZ look—structurally correct and powerfully built from topline to toes, poll to pins.

We know many of our customers are busy feeding and calving this time of year. If you cannot attend on sale day, please note that you are able to bid via the internet, telephone, or through our “Sight Unseen Guarantee” program.

Thank you so much for your continued friendship and support. Customer satisfaction is a top priority at SITZ Angus as we want every customer to be a repeat customer. If there is anything we can do to aid you in your selection process, we are happy to help. Please call or visit any time if you would like to look through the cattle or have any questions. PAP Tested for Over 26 Years

Pulmonary Arterial Pressure (PAP):

Pulmonary Arterial Pressure (PAP) testing is used in cattle as a predictor of susceptibility of High Mountain Disease (HMD) which is a direct result of decreased oxygenation (hypoxia). There are many factors that can lead to the presentation of disease in individual animals. The PAP test is currently the gold standard for testing genetic and environmental components of the disease because not all animals with a high PAP test show outward signs.

Key Factors in Understanding PAP Scores:

Elevation does matter: As elevation increases, the likelihood of cattle becoming hypoxic and elevating their PAP score increases. Scores taken below 5000 feet are less reliable than scores taken over 5000 feet because fewer cattle are hypoxic at lower elevations. As cattle move to an elevation over 5000 feet, the hypoxic state of their lungs increases which increases the reliability of the PAP score. The longer the cattle being tested live at higher elevations, the more reliable the test becomes. Generally, tests in animals living at increased elevations for less than 30 days are not considered reliable. Ideally animals to be tested at elevation will be in that environment for a minimum of 45-60 days.

Age does matter: As cattle mature, they undergo many changes in their cardiopulmonary system affecting the PAP score. These changes can positively or negatively influence the PAP score. Testing of cattle at young ages should only be used as a management tool. It has more variability and less reliability and accuracy than testing of older cattle. It is preferable to test cattle that are at least 12-months old. As cattle reach 18-24 months of age there is an increased reliability of the test for that animal at that elevation. Once cattle are over 2 years of age, there is typically very little change in their PAP score unless other environmental factors have contributed to an increase (e.g., respiratory infections, intensive feeding programs, significant changes in elevation, cardio toxic plants, etc.).

Picking your ideal animal based on PAP Score: PAP scored animals are typically assigned a specific number in a point system. However, animals should be evaluated in ranges rather than by specific numbers. Statistically, for similar elevations, many animals over a score range (2-4pts) have the same likelihood of succumbing to HMD. Furthermore, the accuracy of the testing equipment is +/- 1 point. Don't let your ideal animal get away for a few points on the PAP score. Consider all animals below and up to a few points above the ideal score for your elevation. Animals that score 50 and above should not be used in higher elevation settings as they are highly likely to contract HMD. Even at higher elevations, there is a percentage of lower testing animals that will have increasing scores and show outward signs of HMD. As the elevation increases this percentage decreases and improves the accuracy of the score. This is why it is ideal to retest your animals once they are at increased elevations for the recommended period of time.

Final Thoughts:

1. Test animals at higher elevations to increase test accuracy.
2. Testing of cattle over 12 months of age increases test accuracy.
3. Choose animals for consideration in point ranges rather than specific test points.
4. Choose animals that have lived longer at elevations over 5000 feet before testing to increase reliability of the test.

Proud Participant in

SITZ Angus has been measuring and selecting for maternal excellence for decades and has participated in the MaternalPlus™ program since its inception. The program is designed to capture additional reproductive trait data and, ultimately, expand reproductive and lifetime productivity in herds.

By voluntarily submitting all our data to MaternalPlus and by performing a deeper dive into even more economically relevant traits, SITZ Angus is able to offer an unparalleled transparency to our customers that allows them to make informed decisions based on maternal genetics. Our dedication to the “mamma” cow is why the SITZ prefix is so prevalent in the top percentiles of the new \$M index that measures profitability at the ranch level.

“It was a big commitment for SITZ Angus to submit data for the voluntary MaternalPlus whole-herd reporting program. They were one of the first to account for every female in their operation through the program, but it has helped set themselves apart from other breeders and allowed them to make educated decisions based off data from every cow on the ranch.”

Kelli Retallick, AGI Genetic Service Director

Going the Extra Mile

All Bulls Have Been DNA Tested and Have GE-EPDs

There is little room for error in the cattle business and SITZ Angus is taking every measure to provide you with the most advanced information to help you make your buying decision. Every bull in the offering has been DNA tested and has genomically enhanced EPDs.

Genomic enhanced EPDs (GE-EPDs) are used to enhance predictability of current selection tools, to achieve more accuracy on EPDs of younger animals, and to characterize genetics for traits that are difficult or expensive to measure. GE-EPDs add value because they utilize genomic test results in addition to pedigree, performance and progeny data for increased reliability of an animal's EPD profile.

GE-EPDs are Calculated from:

1. The individual's pedigree
2. The individual's performance record
3. The genomic test results of the animal
4. When available, the performance and genomic results of progeny

Percentile Breakdowns

These breakdowns help producers understand where their animals rank for each individual trait given their category.
